HAT YAO, Thailand — Royal Thai Marines and U.S. Marines with the 31st Marine Expeditionary Unit conducted a bilateral helicopter raid Feb. 16 in Hat Yao, Kingdom of Thailand, as part of Exercise Cobra Gold 2013.

Thailand and the U.S. have co-hosted Cobra Gold for 32 years to develop greater interoperability of forces, improve relationships, and further develop the ability to solve regional challenges among participating nations.

"Cobra Gold allows us to train with our Thai counterparts, share knowledge, and strengthen our relationship," said U.S. Marine...

Minister for Foreign Affairs visits

CAMP FOSTER — Japan Minister for Foreign Affairs Fumio Kishida toured Marine Corps installations and met with key leaders Feb. 16 at Camps Foster and Schwab.

The trip marked Kishida's first visit with U.S. military leaders on Okinawa since his appointment as minister for foreign affairs in December.

Kishida first visited Camp Schwab, where he received a tour of the base and was taken to an observation point where he was greeted by Col. Jonathan D. Covington, the deputy commander for Marine Corps Installations Pacific. Kishida also received a briefing at the observation point on the Marine Corps Air Station Futenma relocation facility from Hirofumi Takeda, the director general of the Okinawa Defense Bureau.

Japan Minister for Foreign Affairs Fumio Kishida and Maj. Gen. Peter J. Talleri shake hands following a meeting on Camp Foster Feb. 16 during Kishida’s first visit to Okinawa military installations since being appointed in December. During the visit, Kishida met with key leaders and received a tour of Camps Foster and Schwab. Talleri is the commanding general of Marine Corps Installations Pacific and acting Okinawa area coordinator.

Okinawa, US leaders discuss cooperation

CAMP FOSTER — Hirofumi Takeda, the director general of the Okinawa Defense Bureau, met with senior U.S. military leaders Feb. 14 on Camp Foster to discuss the purpose and functions of the ODB and how it works with the U.S. military.

The ODB is the Japan Ministry of Defense’s local office on Okinawa, tasked with conducting liaison activities with the U.S. military to contribute to the U.S.-Japan security alliance.

(Takeda’s) responsibilities and...
Maintain healthy heart for long life

Petty Officer 1st Class Jae Kwon

February is American Heart Month, and it is the perfect opportunity to raise awareness on heart health. While we love to celebrate Valentine’s Day with our loved ones, it is also time to get back into shape after the long winter holiday season. Despite all the technological advances made in recent years in the cardiovascular field, one in every three deaths in the U.S. is caused by heart disease. Benjamin Franklin once said, “An ounce of prevention is worth a pound of cure.”

Contributing risk factors to heart disease can be both hereditary and acquired. Many of them, however, can be controlled through lifestyle changes. Following is a list of lifestyle modifications you can take for better heart health.

Stay away from smoking. If you are already a smoker, quitting smoking is one of the best things you can do for your body. Smoking significantly raises the risk of heart disease by hardening and narrowing arterial walls, increasing heart rate, and enabling the formation of blood clots. It is a direct contributor to coronary heart disease and stroke. Take advantage of blood pressure examinations offered at the U.S. Naval Hospital and other clinics.

Eat healthy. Eating more vegetables, nuts, fruits, whole grains and fish and less red and processed meat reduces risk of cardiovascular disease. Many studies have revealed a direct correlation between regular consumption of sugary beverages and heart disease. This includes sports drinks and fruit juice. Prudent consumption of dietary salt keeps blood pressure under control.

“Lifestyle modification is not a one-time affair. It takes proper planning and lifelong commitment, but the payoff is invaluable.”

Check your blood pressure periodically. Of all adults with high blood pressure, 18 percent are not aware of their condition, and many with documented high blood pressure are not within their target levels. Your blood pressure can be checked at home or at your assigned clinic.

Stay active and promote an active lifestyle among children. An astonishing 32 percent of adults reported they do not participate in recreational aerobic activities. Worse yet, 31.8 percent of children between 2-19 years old are overweight and obese. Physical activity does not have to be painful and arduous. Start with something fun like running, walking, playing soccer, hiking or biking. The surgeon general recommends a consistent 30 minutes or more of moderate-intensity exercise daily.

Manage diabetes and cholesterol. Visit your doctor for periodic checks. Drawing blood for labs provides valuable information on cholesterol and blood sugar levels.

Take your medicine. Not all diabetes, blood pressure and cholesterol can be managed solely by engaging in physical activities and eating properly. It is equally important to be compliant with prescribed medications. Be aware of the side effects and consult your doctor for any questions.

Lifestyle modification is not a one-time affair. It takes proper planning and lifelong commitment, but the payoff is invaluable. Visit the Centers for Disease Control and American Heart Association websites for more information. Remember that not all of the advice available online may be for you, so be sure to see your medical provider for annual physical assessments and ask questions. It is time to take ownership of your heart and enjoy a healthy life.

Kwon is a cardiovascular technician with the internal medicine clinic, U.S. Naval Hospital Okinawa.

Lance Cpl. Matthew S. Hartlove greets a resident of Carebridge Assisted Living Center Feb. 12 in Jacksonville, N.C. Volunteers donned their service uniforms and invited individual residents to join them on the center’s dance floor and visited with them. Marines and sailors with 3rd Battalion, 12th Marine Regiment, transport a simulated casualty to an evacuation site as part of a medical evacuation drill Feb. 16 at the Ojojihara Maneuver Area on mainland Japan. During the drill, Marines and corpsmen rehearsed the proper procedures for assessing, treating and transporting casualties from the field to the next level of care. 3rd Bn., 12th Marine Regiment, is part of 3rd Marine Division, III Marine Expeditionary Force.

**Marines, corpsmen participate in medical evacuation drill**

Story and photos by Lance Cpl. Terry Brady

OJOJHARA MANEUVER AREA, Japan — Marines and sailors with 3rd Battalion, 12th Marine Regiment, conducted a field medical evacuation drill Feb. 16 at the Ojojihara Maneuver Area on mainland Japan as part of Artillery Relocation Training Program 12-4.

The medical evacuation drill is regularly scheduled training prior to the beginning of live-fire artillery exercises such as ARTP 12-4 to assess the battalion’s ability to treat injuries in a field environment while allowing medical personnel to develop skills for these situations.

“Being basic corpsmen, our personnel have much to learn during field operations such as this,” said U.S. Navy Lt. Suraj Trivedi, medical officer for 3rd Bn., 12th Marine Regiment, 3rd Marine Division, III Marine Expeditionary Force. “Training in the climate and environment here at the maneuver area gives them an opportunity to enhance their techniques and experience weather and terrain they don’t typically operate in.”

The corpsmen have been through medical courses to deal with common injuries in the field, so making the drill as realistic as possible was very important, Trivedi added.

During the drill, corpsmen were presented with various scenarios involving simulated casualties with injuries such as broken bones or concussions they were required to assess, treat, and transport to the next level of care.

Marines and sailors with 3rd Battalion, 12th Marine Regiment, assess and treat a simulated casualty as part of a medical evacuation drill Feb. 16 at the Ojojihara Maneuver Area on mainland Japan. The drill was conducted prior to the start of the live-fire portion of Artillery Relocation Training Program 12-4 to ensure the effectiveness of the medical staff while in a field environment.

“The drill was great training for us and very challenging,” said Petty Officer 3rd Class Mark Boddy, a corpsman with the battalion. “It allowed us to think and act outside of normal procedures we are accustomed to.”

The corpsmen worked in conjunction with the Japan Ground Self-Defense Force for transportation of the simulated casualties from the maneuver area to a local hospital.

“Field training benefits everyone participating in ARTP 12-4,” said Trivedi. “The Marines learn how to respond to emergency situations, while the corpsmen worked with Japanese forces to practice organizational skills and procedures for treating patients and casualties.”

The exercise gave the corpsmen an opportunity to display their abilities and proficiency in a field environment.

“It was very impressive to see the professionalism and proficiency the corpsmen exhibited,” said Lt. Cmdr. Robert Lovern, the operational stress control and readiness psychiatrist for the operational stress control and readiness psychiatrist for 3rd Marine Division. “They identified several potential trouble areas, and the medical staff worked together to overcome them, which is a very important ability to develop when conducting bilateral training.”

The drill was a great way for the Marines, corpsmen and Japanese forces to work together while ensuring the corpsmen are ready to treat casualties in the field, Trivedi added.

“Because of the necessity of field-ready corpsmen during these exercises, our goal is to run this drill more often during training on Okinawa,” said Trivedi. “It will give the Marines and corpsmen more opportunities to develop skills before going on exercises.”

**Briefs**

**USNH OKINAWA RELOCATION BRIEFS**

U.S. Naval Hospital Okinawa will hold briefings to discuss the upcoming move to the new facility on Camp Foster as follows:

- Feb. 27, 6 p.m. at the Camp Foster Community Center
- March 1, 11 a.m. at the Camp Foster Chapel

Briefings are open to all status forces agreement personnel and retirees.

**FOSTER COMMISSARY TEMPORARY CLOSURE FEB. 25-26**

The Camp Foster Commissary will be closed Feb. 25-26 to conduct annual inventory. For more details, call 645-2712.

**LIBERTY POLICY UPDATE**

U.S. Forces Japan announced an updated baseline liberty policy Feb. 13 for all service members on Japan. The revised III MEF/MCIPAC leave and liberty policy letter is located at the following common access card-enabled link: https://intranet.mcbutler.nmci.usmc.mil/G1/Administration/Adjuvant/.

**YOUNG MARINE BOOT CAMP**

The Okinawa Young Marine Battalion has scheduled registration and parent orientation sessions for upcoming boot camp.

The Camp Courtney Young Marines will hold a registration drive March 2 from 11 a.m. to 2 p.m. at the Camp Courtney post exchange. For more information, contact Master Sgt. Joseph L. Davila at joseph.davila@usmc.mil.

The Camp Foster Young Marines will hold a parent orientation and registration session March 1 from 6:30-8 p.m. at building 5710 on Camp Foster. For more information, send an email to campfosteryoungmarines@gmail.com.

**PHISHING EMAILS AND SPAM**

Due to a significant increase in phishing emails and spam on the internet directed toward the DOD community, all users should be aware of potential email scams, fake antivirus software, phishing attacks and social networking scams. Recipients of such content should notify their command cybersecurity manager or information systems coordinator and delete the message. Users should not click on links or forward emails with suspicious links to other users.

For more information, go to www. staysafeonline.org or call 645-5015 or 645-3955.

**TO SUBMIT A BRIEF, send an email to okinawamarine.mcb.fcr@usmc.mil, or fax your request to 645-3803. The deadline for submitting a brief is noon Friday. Okinawa Marine reserves the right to edit all submitted material.**
CAMP HANSEN — Marines with 3rd Intelligence Battalion completed a chemical, biological, radiological and nuclear defense course Feb. 11-15 at Camp Hansen, increasing their ability to operate in contaminated environments.

"The course is designed to teach Marines how to react to different CBRN attacks and identify what level of mission-oriented protective posture gear is necessary," said Lance Cpl. Nickolas A. Pasetto, an instructor for the course and CBRN specialist with 7th Communications Battalion, III Marine Expeditionary Force Headquarters Group, III MEF.

The course consisted of five days of classes and practical application training of donning gas masks and MOPP gear and reacting to mock CBRN attacks.

"There are (three) different types of attacks," said Lance Cpl. Jasmine Gonzalez, an instructor for the course and CBRN specialist with 7th Comm. Bn. "The attacks can be spray, flash or gas."

The Marines were trained to recognize and respond differently to each form of attack.

"It’s important to know what to do during each scenario," said Lance Cpl. Anthony D. Marano, a geographic intelligence specialist with 3rd Intel. Bn., III MHG, III MEF. "In the situation of a spray attack, you should take cover under something, whether it be a roof or a poncho, so you are not directly exposed to the contaminant.

"In a situation where you see a flash, you should drop to the ground with your weapon underneath you, face away from the direction of the flash, and remain on the ground until the flash is over."

Marines also learned how to distinguish which level of MOPP gear is appropriate for certain types of attacks or scenarios and the proper procedure for shifting levels of MOPP gear.

"There are different methods you can use to determine whether or not it is safe to remove your mask," said Pasetto. "The most common method is the selective undonning method. One person is selected to remove their mask for 30 seconds and then put it back on. After closely evaluating the person to see if they feel any side effects, the rest of the Marines slowly take their mask off in intervals."

After studying and training, the Marines completed the course well prepared for any type of CBRN attack they may encounter.

"It’s important for the Marines to really internalize the knowledge and procedures taught during the course," said Pasetto. "What they learned could be the difference between life and death for their fellow Marines in the event a CBRN attack should occur."

---

Marines volunteer, community benefits

Lance Cpl. Donald T. Peterson
OKINAWA MARINE STAFF

KIN TOWN, OKINAWA, Japan — Marines with 7th Communications Battalion volunteered to assist with grounds maintenance at Hikarigaoka nursing home and at a nearby shoreline Feb. 14 in Kin Town.

The hard work and dedication of the volunteers with the battalion, part of III Marine Expeditionary Force Headquarters Group, III MEF, continued a tradition of Marines volunteering to assist the Kin Town community.

“We came out here to help strengthen the long-standing relationship we share with the nursing home,” said Lance Cpl. Jordan A. Wayne, a data systems technician with the battalion. "I run by the bay quite frequently and recently noticed how much trash was on the seaweed, which is believed to promote the upcoming hijiki harvest, an annual collection of the seaweed, which is believed to promote good health and a long life."

"As the cleanup came to an end, with the Marines having done all the work, the local community came outside to help clean up the bay," said Lance Cpl. Donald T. Peterson, an instructor for the course and CBRN specialist with 7th Comm. Bn. "It’s a great pleasure to see what the Marines do to help out the local community."

"I am very grateful and can’t wait for them to come visit and help out once again," said Chiemi Okuma, the office manager for Hikarigaoka nursing home. "The Marines of 7th Comm. Bn. have been volunteering with 3rd Intelligence Battalion to assist the Kin Town community. The staff and local community are always pleased and happy to see the hard work they do to help."

The Marines of 7th Comm. Bn. have been volunteering at the nursing home, visiting residents on holidays, and providing grounds maintenance for the past 18 years, according to Okuma.

While one group of Marines assisted with grounds maintenance at the nursing home, another group cleaned the shore of a nearby bay.

"We started at one end of the bay and went all the way to the other side," said Master Sgt. Ciriaco R. Ayala, the operations chief for the battalion. "I run by the bay quite frequently and recently noticed how much trash was on the shore. I couldn't just leave it there, so I decided to ask the battalion's Marines who would like to give back to the local community to come out and clean up the bay."

The Marines filled up more than 20 bags with trash and five bags with recyclables.

"It’s great to see the Marines come out and help with such an event," said Ayala. "It shows the local community that we are here to help and to give back to them however we can."

The bay is one of the several places on Okinawa residents visit to harvest seaweed during the upcoming hijiki harvest, an annual collection of the seaweed, which is believed to promote good health and a long life.

As the cleanup came to an end, with the nursing home and bay once again looking their best, the Marines set off back to work having strengthened the already close ties between the battalion and the community.

"It’s a great pleasure to see what the Marines do to help out the local community," said Okuma. "I am very grateful and can’t wait for them to come visit and help out once again."
Cobra Gold

2nd Lt. Jacob Zalewski, a platoon commander with Headquarters and Service Company, Battalion Landing Team 1st Battalion, 5th Marine Regiment, 31st MEU, “The Royal Thai Marines are the subject-matter experts when fighting in this environment. We have to take what knowledge we can from them.

The integrated force of approximately 75 Marines was inserted via one CH-53E Sea Stallion and four CH-46E Sea Knight helicopters with Marine Medium Helicopter Squadron 262 (Reinforced), 31st MEU, to secure a small town more than a kilometer from the landing zone.

Seconds after touching down in an open field, Royal Thai and U.S. Marines rushed out and secured the perimeter around the helicopters. Once the helicopters were back in the air, the force consolidated into a tactical formation and entered the dense jungle. Maneuvering through thick foliage, the international Marine force set up in advantageous positions around the occupied town without being spotted. U.S. Marines set up support-by-fire and security positions while the Thai platoon took the assault role.

The division of forces allowed the Marines to efficiently accomplish their mission while providing each side with a valuable training opportunity. The U.S. Marines gained experience in jungle operations, and the Royal Thai Marines gained experience in urban assault.

“Today, we were able to improve our skills in an urban environment, something we can use against an opposing force inside of structures,” said Royal Thai Marine Pvt. Sarunyou Phanin, a rifleman with 3rd Battalion, 1st Marine Division, Royal Thai Marine Corps.

Cobra Gold is in its 32nd iteration, there are new experiences for participants each year, according to Royal Thai Marine Sgt. Kyoon Dennanong, a platoon sergeant with 3rd Battalion, 1st Marine Division, Royal Thai Marine Corps.

“Every time we train together, we learn something new,” said Dennanong. “Today was a great opportunity to work together, and we look forward to more training during this year’s exercise.”

Overall, the visit highlighted the continued cooperation and coordination between the two parties to reinforce the steadfast U.S.-Japan alliance.

“There is no stronger alliance than that of Japan and the U.S., and it will always remain strong,” said Talleri. “From my country to yours, we thank you for that strong alliance.”

FM Visit

After the tour of Camp Schwab, Kishida traveled to Camp Foster and met with Maj. Gen. Peter J. Talleri, the commanding general of MCIPAC and acting Okinawa area coordinator; Alfred R. Magleby, the consul general, Naha; and other members of MCIPAC, the U.S. Forces Japan Okinawa Area Field Office and Ministry of Foreign Affairs of Japan.

“We would like to continue to work with Lieutenant General Glueck and Major General Talleri as well as the other officers stationed in this region to deepen the cooperation between our two countries,” said Kishida.

After the meeting, Kishida received a tour of Camp Foster, including the camp’s housing areas.

“It is extremely important to meet, and I am thankful for your time and want to congratulate you on your appointment,” Talleri told Kishida. “We are honored to be hosted by the great country of Japan and very grateful to call this our second home.”

Kishida appreciated the opportunity to visit Marine Corps installations and visit with key leaders on Okinawa, and thanked the U.S. military for its hard work and dedication to the U.S.-Japan alliance.

“I would like to express our appreciation to all the military officers in Japan regarding their efforts to maintain peace and stability in the region,” said Kishida.

Overall, the visit highlighted the continued cooperation and coordination between the two parties to reinforce the steadfast U.S.-Japan alliance.

“From my country to yours, we thank you for that strong alliance.”

Cooperation

Mission are critical for everyone in this room and revolve around maintaining positive relations with the military,” said Maj. Gen. Peter J. Talleri, the commanding general of Marine Corps Installations Pacific and Marine Corps Base Camp Butler. “He understands the integration and story (of our work) is told in such a way that it is highly transparent and that information is very forthright, so his staff can take on their responsibilities to make sure our two countries are doing the very best to contribute to our alliance.”

Takeda began his discussion by reinforcing the importance of U.S. forces to the U.S.-Japan alliance.

“I deeply appreciate this valuable opportunity to talk to the leaders of the Marine Corps,” said Takeda. “I have wanted to have the opportunity to speak with the leaders, so I asked Major General Talleri for this favor. I am very pleased to find myself here today. I would like to express my deep respect and gratitude to you for your deep devotion to the mission here in Japan. The presence of U.S. forces is critical to ensuring peace and security in Japan, as well as internationally, and is very important.”

Takeda spoke to the leaders about the many challenges and issues he and his staff encounter on a daily basis.

“Obvious challenges do occur from time to time,” said Talleri. “They can range from incidents to decisions on what equipment is forward-based for U.S. forces on Okinawa. These are the types of issues his staff works on closely with the U.S. military and the consulate general’s office.”

Upon conclusion of Takeda’s remarks, Talleri expressed his hopes that discussions will take place again and made clear he wants to continue to facilitate direct communication to help resolve the many issues the ODB faces.

“I think it is great for us to work together through exchanges like this,” said Talleri. “The director general can get a good sense of what things are on our minds, many of which we will work with him and his staff on, so it is important we maintain an open dialogue so we can share these kinds of discussions to ultimately enhance our ability to work together on important issues.”

Sailors teach youth about dental health

Petty Officer 2nd Class Henry B. Shaw holds a stuffed alligator for Shawna Shobe while she brushes its teeth during a presentation for a second-grade class Feb. 12 at Kinser Elementary School. Shaw was a member of a group of volunteers who are visiting elementary schools on military installations throughout Okinawa in February, which is National Children’s Dental Health Month. Sailors educated students on which foods and drinks to avoid and proper brushing and flossing techniques to maintain good dental hygiene. Shaw is a hospital corpsman with 3rd Dental Battalion, 3rd Marine Logistics Group, III Marine Expeditionary Force. Shobe is a second-grade student at Kinser Elementary School.

Marines volunteer, give back to community

Throughout the history of the Corps, Marines have conducted themselves with honor, courage and commitment, earning the respect and high expectations of people around the world. While most may cite examples of actions in combat to explain the core values, equally important in establishing the Corps’ legacy has been the selfless work of Marines in the local communities where they are assigned.

Marines on Okinawa can volunteer with several organizations on and off base, ranging from school reading programs and blood drives to community cleanups and youth sports programs. Volunteering provides an opportunity for Marines to get involved in areas beyond their normal responsibilities and help make a difference.

“Volunteering has given me a better understanding of commitment,” said Lance Cpl. Lahmia M. Hegwood, a combat production specialist with combat camera, G-3/5, operations and training, Marine Corps Base Camp Smedley D. Butler, Marine Corps Installations Pacific. “When I volunteer on the weekends and I have to be at my event at 6 a.m., no matter how tired I am, I know I must fulfill my commitment. If I do not, then I am letting down a lot of people who are counting on me.”

Hegwood volunteers as a youth cheerleading squad coach at Camp Foster, an activity she finds enjoyable and rewarding.

“Introducing little girls to something they may love doing for the rest of their lives excites me,” said Hegwood. “I love kids, dance and giving back. It is a win-win situation.”

Volunteering is a good way for service members to meet new people, do something positive, and interact with the local community.

“Volunteering can give Marines a sense of accomplishment and help them escape from daily stress that comes with being away from home as they interact with members of the local community,” said Randolph L. Mitchell, the manager of the Single Marine Program. “It also gives them an opportunity to grow, learn and thrive within the military and Okinawa cultures.”

The Marine Corps Community Services’ Single Marine Program is one of many reliable resources for finding volunteer opportunities around Okinawa.

“We provide Marines with a friendly environment where they can feel comfortable,” said Mitchell. “The most rewarding part of my job is that I get to see these Marines make an impact on our community by becoming mentors others can emulate.”

Marines can also contact their installation’s community relations specialist for volunteer opportunities. Marines can earn recognition through military awards like the outstanding volunteer service medal, certificates of commendation and letters of appreciation by volunteering. However, volunteers say there is more to be gained than individual accolades. “Being able to volunteer is great,” said Staff Sgt. Kevin L. Tisdale, a civil affairs operations chief with III MEF. “If you talk to anyone that does it on a regular basis, they will tell you it is not about awards, but giving back and helping people.”

There is virtually no limit to how Marines can have a positive influence on their community if they get involved.

“If you want to volunteer, then sign up for something that appeals to you and stick with it,” said Hegwood. “Attitude is everything. Volunteer because you like to help people and want to make a difference.”
Q uill pens, ink wells and chalkboards are all from a bygone era. But at some schools, pen and paper may soon become just as outdated.

Recently, Lester Middle School began issuing laptop computers to its students in February as part of the Department of Defense Education Activity’s new one-to-one laptop pilot program. DoDEA is striving to increase engagement in learning and promote educational resources and methods to keep pace with modern tools through this new program.

“We are in the 21st century, a time which most of the students have only been alive in,” said Altorn R. Grade, Lester Middle School principal. “DoDEA is brave and forward thinking in promoting this huge step in learning for our students in thinking in promoting this huge step in learning for the children.”

The program intends to improve students’ ability to access digital resources, actively engage the course curriculum, and collaborate among peers and teachers. “We want everyone to know this program is an educational enhancement, not a replacement for traditional teaching,” said Grade. “The children will be exposed to broader and faster means of obtaining and determining information for their educational needs.”

The tools will also help increase reading, writing and critical-thinking skills, Grade added.

The laptops provide a means to improve education outside the classroom, as the children will be requested to use them at home. “One of the best aspects of the program is, if a student’s family doesn’t have an internet connection, they will still be able to complete their assignments,” said Tina L. Nelson, an education technician at the school. “All of the computers have classroom material installed on them, so students will be able to study and complete assignments offline.” To ensure the students have a unified understanding of materials and the software provided, the school is issuing laptops with the same operating system and educational software preinstalled.

“Not everyone in the school has (PCs) readily available at home,” said Nelson. “Issuing the same model laptop with the same operating system to each student makes transferring data easier.” For students, the new laptops not only offer the opportunity to learn, but also an easier and more efficient way to complete assignments and store their work.

“If I feel excited to get this laptop,” said Caleb Roberts, a sixth-grade student at the school. “I can do my homework and hand it in to my teachers without forgetting about it or misplacing it. It’s good because you have all your resources saved and don’t have to bug your parents when you can’t find the answer.”

With the many advantages of this new program, Nelson and others see the laptop as a new avenue for learning and hope students will be able use them to further their education.

“The laptops are an educational resource that gives the students opportunities that they don’t have with pen and paper,” said Nelson. “The laptops open up research and creative opportunities to the students, and we hope (the program) enriches educational opportunities and the learning process.”
Terrain dictates leadership at JWTC

“The basic jungle skills course is more focused on the small-unit leaders. Success will depend on if the squad leaders make sure the Marines are doing the right things,” said Lt. Col. Thomas B. Noel, the commanding officer of JWTC. “Platoon commanders have a limited amount of control once Marines start pressing through the jungle — you get in 50 to 60 meters and suddenly you can’t see someone 10 meters away, so the priority becomes getting the fire team and squad leaders to take charge.”

The squads worked together during the week-long course to learn skills needed to operate in a jungle environment, including obstacle crossing, rappelling, rope bridge crossing, patrolling and land navigation. The Marines used everything they learned throughout the week to complete the endurance course.

“The Marines’ decision making and task management have definitely improved over the last seven days,” said Lance Cpl. Caleb W. Walcott, an instructor at JWTC. “I saw a growth in terms of leaders taking charge and Marines listening to and understanding orders to accomplish their mission.”

“The increased emphasis on small-unit leadership provides opportunities for junior Marines to step up during the course and assume leadership roles within their squads.”

“Some of the Marines who are typically quiet are the ones that end up calling out the commands and telling the other Marines what to do when they get into a situation like this,” said Walcott. “The course brings out the confidence in them.”

Developing junior Marines’ leadership qualities was an emphasis for 3rd LE Bn, as it conducted the basic jungle skills course.

“We are a fairly new unit, that has only been in existence for the last eight months, so we are developing our junior Marines’ leadership internally,” said Capt. Cory L. Holiday, company commander, Company B, 3rd LE Bn. “The control force individuals placed in leadership positions to give verbal commands in a tactical environment, which is not something we have many opportunities to do in garrison.”

Instructors with the training center designated Marines as casualties at certain points during the course, forcing the already fatigued Marines to work together to cross the remaining obstacles while carrying their wounded comrades.

“During a deployment, it is going to be a high-stress environment anytime you leave the wire, so being able to function under stress while tired and experiencing mental and physical strain is something the Marines need to be able to do,” said Walcott. “Training in these types of conditions is how they learn to do that.”

The Marines rose to the challenge of the high-stress environment to complete the course and demonstrate their internal leadership at the squad and fire-team level.

“Being out here definitely brought the teams together,” said Holiday. “It forced the lance corporals to take charge of a squad and get the Marines through the obstacles.”

The endurance course stretches for miles, filled with winding, dense jungle and nearly vertical slopes. Marines encounter rivers, flooded trenches and submerged tunnels filled with waist-deep mud and cable bridges that must be traversed to reach the end.

Members of 3rd Law Enforcement Battalion, III Marine Expeditionary Force Headquarters Group, III MEF, used small-unit leadership techniques to overcome the course’s challenges Feb. 15 at the Jungle Warfare Training Center on Camp Gonsalves as the final event of the basic jungle skills course.

Terrain dictates leadership at JWTC

Lance Cpl. Colin J. Hoffman provides rear security with his rubber M16A2 service rifle Feb. 15 at the Jungle Warfare Training Center while his squad evacuates a simulated casualty during the endurance course. The casualty was secured to an improvised stretcher fashioned from tree branches and utility blouses, as Marines maintained a combat mindset and had to work only with what they could find in the jungle and brought to the course; Hoffman is a military policeman with 3rd Law Enforcement Battalion, III Marine Expeditionary Force Headquarters Group, III MEF.

Lance Cpl. Gregory N. Hager, center, is evacuated Feb. 15 at the Jungle Warfare Training Center during the endurance course. The course emphasized small-unit leadership, getting junior Marines to take charge to accomplish their squad’s mission. Hager is a military policeman with 3rd LE Bn.
Japanese phrase of the week:

“Ohairi kudasai.”

(pronounced: oh-hah-ee-ree koo-dah-sah-ee)

It means, “Come in.”

The rhythm of the sea helps me escape the chaos of life’s stress and put it all into perspective.

Relax to sounds of nature

Destressing seas break life’s stress and anxiety

Life can be filled with a lot of stress, whether at work, home or at places we enjoy recreational activities. When I become anxious or really stressed out, I try to make my way to the sea. The East China Sea off the coast of Okinawa is the perfect place at this time in my life.

When I am there, I like to sit down and look out over the great sea. All of my stress seems to dissipate as the sounds and force of the waves display the power of creation. I get consumed by the magnificence of the scenery and all the sounds of nature.

The sea absorbs my stress and anxiety with its great depths and purifies me with its calming sounds. The rhythm of the sea helps me escape the chaos of life’s stress and put it all into perspective.

The sea restores me and has taught me that I too should let the stress in my life be absorbed by something bigger than I.

When you feel stressed and anxious, I encourage you to stop, be still, calm your mind, and humble your heart. Think about the beauty and power of the sea. Let the image of the crashing waves absorb all of your stress and anxiety.

Like the waves of the sea, stress and anxiety can roll in and break you apart.

Don’t let it get the best of you.
